Sanskruti *Naik*

AI engineer who designs the experience

Portfolio — start here (a playable 3D museum) · GitHub · LinkedIn · naiksanskruti03@gmail.com · +91 91750 89797 · Kolhapur, India

Profile

I build AI products people can trust, and I care how they feel to use. My work pairs real engineering (RAG, computer vision, end-to-end encryption) with interaction design: answers that cite their source, models that explain themselves, apps that work offline. I prototype in Figma and Blender, then ship it in code.

Experience

AI / ML Intern — Endureva Innovations LLP — Jan 2026 – Jun 2026

Answers you can actually verify — *Tender Intelligence, offline RAG* · Live app

- **Problem:** teams reviewing tenders hundreds of pages long can't trust an AI that sounds sure but shows nothing.
- **What I built:** a private, fully offline assistant whose every answer quotes the exact source sentence and page, plus Go/No-Go, risk and contradiction tools.
- **Design decision:** evidence first. Hybrid search with reranking finds the right clause; sentence-level citations let a reviewer verify in one click.

Privacy is an architectural decision — *SecureChat*

- End-to-end encrypted messaging (Signal Protocol) designed local-first, so chats, media and 500 MB files stay usable offline. One React codebase ships to web, Android and iOS.

A diagnosis that shows its work — *crop-disease AI* · Figma prototype

- Designed the app in Figma, then shipped it end to end, from data pipeline and CNN training to a **FastAPI** service and **Flutter** app (**38 diseases, 92% accuracy, under 200 ms**, 30% faster after quantization); **Grad-CAM** heatmaps show which part of the leaf drove each diagnosis.

Change, seen from above — *satellite construction detection (client work, confidential)*

- Worked on an ML system that flags unauthorised construction from satellite imagery (**YOLOv8** ensemble on Sentinel-2, SAR and Cartosat-3), building its **PostGIS** database, Web GIS dashboard and five-day alerts.

Built for patchy connections — *offline-first apps*

- **Water Survey**, a geo-tagged field app that syncs when signal returns, and a restaurant **POS** with role-based access and live sales analytics (code); presented results and trade-offs to non-technical stakeholders.

Projects

AI that explains why — *XAI-Care* · Figma prototype — 2025 – 2026

- Designed in Figma, then built: a caregiver dashboard for fall detection where every alert shows *why* (Grad-CAM, SHAP), designed for people with no ML background.

A portfolio you play — *3D interactive museum* · Live · Code — 2026

- Concept to code in Three.js: visitors choose a character, meet my motion-captured 3D avatar as their guide, and discover seven exhibits, each opening into its own art-directed 3D world, with live presence of other visitors. Responsive from phone to 4K.

Web design builds · Pawfect Café (code) · Construction company (code) · Car showroom (code)

Craft & Tools

Design & prototyping: Figma, Blender, Canva, interaction and motion design, 3D for the web (Three.js / WebGL), AI-assisted prototyping ("vibe coding") with Claude Code

Front-end: JavaScript, React, HTML/CSS, Flutter, responsive and accessible UI · **Data & BI:** Power BI, SQL, data visualisation

AI / ML: LLMs, RAG, prompt engineering, LangChain, Hugging Face, Ollama, TensorFlow, PyTorch, computer vision, explainability (Grad-CAM, SHAP)

Back-end: Python, FastAPI, PostgreSQL, SQLite, Docker, Git

Education

B.Tech, Artificial Intelligence & Machine Learning — Sanjay Ghodawat University · CGPA 8.36 / 10 — Graduated Oct 2026

Community & Recognition

- **3rd Prize, Smart India Hackathon (college level)**: designed a sign-language learning app for English and Gujarati Sign Language.
- **Management Team Lead, Prabal Hackathon**: ran a 40-hour national hackathon for 600+ participants (GDG SGU) · **Core Member, Google Developer Group SGU**: workshops, design sprints and peer learning.
- **Certifications:** NPTEL AI for Management (12 weeks, 2026, 82/100) · ISRO Remote Sensing & Digital Image Analysis · International Workshop on Cloud and Edge Computing with Prof. Rajkumar Buyya (2022) · Accenture Software Engineering Simulation · C++ OOP
