Sanskruti *Naik*

AI engineer who designs the experience

Portfolio — start here (a playable 3D museum) · GitHub · LinkedIn · naiksanskruti03@gmail.com · +91 91750 89797 · Kolhapur, India

Profile

I build AI products people can trust, and I care how they feel to use. My work pairs real engineering (RAG, computer vision, end-to-end encryption) with interaction design: answers that cite their source, models that explain themselves, apps that work offline. I prototype in Figma and Blender, then ship in code, including a real-time 3D portfolio with a motion-captured avatar of myself.

Selected Work

Answers you can actually verify — *Tender Intelligence, offline RAG* · Live app — 2026 – present

- **Problem:** teams reviewing tenders hundreds of pages long can't trust an AI that sounds sure but shows nothing.
- **What I built:** a private, fully offline assistant whose every answer quotes the exact source sentence and page, plus Go/No-Go, risk and contradiction tools.
- **Design decision:** evidence first. Hybrid search with reranking finds the right clause; sentence-level citations let a reviewer verify in one click.

Privacy is an architectural decision — *SecureChat* — 2026 – present

- End-to-end encrypted messaging (Signal Protocol) designed local-first, so chats, media and 500 MB files stay usable offline. One React codebase ships to web, Android and iOS.

AI that explains why — *XAI-Care* — 2025 – 2026

- Caregiver dashboard for fall detection where every alert shows *why* (Grad-CAM, SHAP), designed for people with no ML background.

A portfolio you play — *3D interactive museum* · Live · Code — 2026

- Concept to code in Three.js: visitors choose a character, meet my motion-captured 3D avatar as their guide, and discover seven exhibits, each opening into its own art-directed 3D world. Live presence shows other visitors walking the museum. Responsive from phone to 4K.

Web design builds · Pawfect Café (code) · Construction company (code) · Car showroom (code)

Experience

AI / ML Intern — Endureva Innovations LLP — Jan 2026 – Jun 2026

- Shipped an AI crop-disease diagnosis feature end to end: data pipeline, CNN training, a **FastAPI** service and a **Flutter** app built for field use (**38 diseases, 92% accuracy**).
- Made it fast enough for real-world use: **under 200 ms** per prediction, and **30% faster** inference after quantization and batching.
- Built trust into the product with **Grad-CAM** heatmaps that show users which part of the leaf drove each diagnosis.
- Designed and built an offline-first restaurant **POS** (Flutter, FastAPI, SQLite) with role-based access, inventory alerts and live sales analytics (code).
- Turned model results and trade-offs into clear recommendations for non-technical stakeholders.

Craft & Tools

Design & prototyping: Figma, Blender, Canva, interaction and motion design, 3D for the web (Three.js / WebGL)

Front-end: JavaScript, React, HTML/CSS, Flutter, responsive and accessible UI · **Data & BI:** Power BI, SQL, data visualisation

AI / ML: LLMs, RAG, LangChain, Hugging Face, Ollama, TensorFlow, PyTorch, computer vision, explainability (Grad-CAM, SHAP)

Back-end: Python, FastAPI, PostgreSQL, SQLite, Docker, Git

Education

B.Tech, Artificial Intelligence & Machine Learning — Sanjay Ghodawat University · CGPA 8.36 / 10 — Oct 2026

Community & Recognition

- **3rd Prize, Smart India Hackathon (college level)**: designed a sign-language learning app for English and Gujarati Sign Language.
- **Management Team Lead, Prabal Hackathon**: ran a 40-hour national hackathon for 600+ participants (GDG SGU) · **Core Member, Google Developer Group SGU**: workshops, design sprints and peer learning.
- **Certifications:** NPTEL AI for Management (12 weeks, 2026, 82/100) · ISRO Remote Sensing & Digital Image Analysis · International Workshop on Cloud and Edge Computing with Prof. Rajkumar Buyya (2022) · Accenture Software Engineering Simulation · C++ OOP
